

Echidna Fact Sheet

- An Echidna tongue can reach 18 cm long and they can flick it out to catch ants a 100 times a minute!
- They can eat up to 40,000 ants and termites a day!
- Echidnas and the platypus are the only egg-laying mammals, known as monotremes. They will lay one egg.
- They have pouches like kangaroos.
- Their claws are angled backwards which helps them dig.
- They can live up to 50 years!
- They live in New Guinea and mainland Australia.

Philippians 4:19 (NKJV)

And my God shall supply all your need according to His riches in glory by Christ Jesus.

(God will take care of all your needs!)
